

UberVault

Use your mobile device to securely store a digital backup copy of the physical Personal ID and/or Credit Cards carried in your actual wallet.

Application Help Guide

Download on the
App Store

© 2022 Omni Consulting, LLC

Foreword

*The main purpose of this app is to enable the user to create and maintain virtual Lockboxes to securely store **Personal ID/Cards** locally on your Apple iPhone, iPad, or iPod touch device (the **UberVault**).*

The virtual Lockboxes can file digital copies of Charge Cards, Drivers Licenses, or other similar personal items suitable for importing by the device owner.

These captured items constitute an off-line backup copy of original records for historical purpose and future reference.

All information supplied by the user is stored locally on the device and kept private, not being exposed by the app to any other app or web-based entities. No internet connection is required to use the app.

V. Preferences

VI. App Help Guide

I. Overview

'UberVault' securely manages **Personal ID/Cards** in image form for back-up retention and on-demand personal identification and recall purposes.

The app allows for the safekeeping of original Wallet documents as digital copies in user-defined virtual Lockboxes, all securely stored on your mobile Apple Device.

'UberVault' has built-in categories by which the digitized items are organized, such as: Credit/Debit Card, Drivers License, Club Membership, Social Security Card, Student ID, and several others types.

The user may also define preferred custom types.

These items are stored in virtual Lockboxes, assigned by owner of the original documents.

Data entry, search, and full backup/restore capabilities are provided to an authenticated user.

Data capturing is facilitated by using the device camera to either photograph or scan the source documents for storage in the '**UberVault**' virtual Lockbox.

User Lockbox items can be promptly edited or displayed by the device owner.

For obvious security reasons, **Personal ID/Card** functions require that the device Owner activated the app login protection feature.

NOTE: The app does not depend on being connected to the Internet, or a Local Area Network (LAN) and can be used in Airplane Mode.

All user-data is securely stored locally on the device and access-protected with owner configured password and/or a biometric type authentication method (e.g. Touch ID, Face ID).

'UberVault' is developed as a universal app, targeted for iPhone, iPad, or iPod touch devices.

iOS 11.0 (and later) must be deployed on the device to install the app from the App Store.

II. App Installation

‘UberVault’ app is downloaded from the Apple App Store directly onto the owners device, running iOS/iPadOS version 11.0+. The app is specifically designed to only function on iPhone, iPod touch, or iPad units without requiring any network connectivity.

The app will start in preparation for initializing the operational environment by requesting authentication credentials from the device owner. Certain start-up views will be displayed to guide through the setup process.

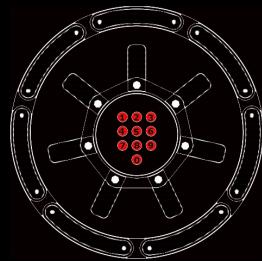

The following example screen shots represent the installation sequence on an iPhone.

App Installation Notice

For privacy reasons, it is required to set up your own 'UberVault' app login credentials. You will then be able to securely:

- 1) Create virtual Lockboxes for you and family members to store and organize digital copies of any Personal Items (e.g. Drivers License, Credit/Debit Card, Passport, Access Card, etc).
- 2) Make Widgets (iOS/iPadOS 14+ only) to display any one Lockbox Item on the 'iPhone' Home or Lock Screen.

Lockbox ID

Demo4711

First Name

Jo Olaf

Last Name

Doe

Nickname *

JoJo

Owner Date of Birth *

January 12 1994

(optional)

Next

Lockbox ID:

Assign an ID to uniquely identify the owner of a virtual Lockbox (minimum of 5 characters)

First/Last Name:

The Owners First and Last Name

Nickname:

The Owners Nickname (optional)

Date of Birth:

The Owners DoB (optional)

The Information is used by the app to associate an imported image item to a specific owners Lockbox.

To prevent unauthorized access to the features of the '**UberVault**' app, you need to provide the following-

Password:
Minimum of four Characters

Security Question:
Pick one of the presented options.

Security Answer:
This is your response that is assigned to the Security Question.

IMPORTANT: The security Question/Answer pair is required in case you wish to change or recover the app login password.

If the login password cannot be recovered, then the only way to re-enable access to the app features is by either deleting and re-installing the app from the App Store (resulting in the loss of data), or loading a previously saved '**UberVault**' backup file.

Upon completion of the setup procedure, and unless Face/Touch ID is enabled, the user is presented a login screen to authenticate in order to open the app for general use.

The initial screen will enable the device owner to add the first digital Personal ID/Card item into the app database by tapping the ‘Add New Item’ list entry. Touching the ‘My Lockbox’ heading will display a general information view, while tapping the ‘Person’ icon allows for changing the image.

III. Privacy and Data Protection

All data collected to meet the functional objectives of this app ('**UberVault**') are securely stored internally on your device and **not** uploaded to a remote server, iCloud, or any other Internet-based repository/service.

There is no '**UberVault**' Cloud.

There is no **registration** by forcing you to set up an account with the app developer (**Omni Consulting, LLC**), or registering any of your **Personal ID/Card** data.

There is no **Profiling**. Neither **Apple** nor the app developer can see any of the information that is entered by you.

Recording and analyzing data is not the developers business model.

We fully support the privacy initiatives spearheaded by **Apple**, and therefore publish '**UberVault**' exclusively on **iOS** and **iPadOS** platforms within the letter of the **App Store Legal Privacy Policy**:

"Apps submitted to the App Store that support account (e.g. Lockbox) creation must also let users initiate deletion of their account within the app."

Deleting an account removes the account from the developer's app, along with any data associated with the account that the developer isn't legally required to maintain. Providing this capability gives the user more control of the personal data they have shared.”

Users can manage their data in confidence being assured that their information is kept private on the device on which the app is installed from the **Apple App Store**.

The user can control the apps' iOS Privacy settings based on certain functions to be performed. Typical allowed features include access to:

secure app authentication

1. *Camera to take a photo or scan an original item for import into the app localized user virtual Lockbox.*
2. *Photos to retrieve an existing image already stored on your device*
3. *Face/Touch ID to allow quick and*

Devices running iOS V14+ and supporting Long-press and/or 3D Touch gestures, when applied on the app icon of the Home Screen, will project the owners digital Lockbox item in Widget appearance.

Access to the app privacy features requires authentication by means of user log-in credentials.

IV. Personal ID/Cards

- A. Add New Item
- B. List/Edit Item
- C. Show Widget

Overview

The app allows for the registration and secure storage of **Personal ID/Cards**.

Multiple items can be entered per person.
However, duplicate entries are not permitted.

The user has the option to display a Personal ID/Card for identification purposes.

The device owner may also create a widget for display on the device Home/Lock Screen (requires iOS 14+), and/or show the Record Card image via a short-cut option by pressing the app icon.

Personal ID/Card data management is separated by two virtual Lockbox Categories:

1. MY LOCKBOX

This folder is used to store information specifically related to the owner of the device on which the app is installed, or the primary user of the app who also acts as the administrator of the UberVault.

2. FAMILY LOCKBOXES

This folder, if applicable, is intended to store additional information for any other family members.

The following functions are available, differences between the two Lockbox classifications are indicated:

A. Add New Item

Enables one to register one or more **Personal ID/Cards**.

When creating a digital form of a **Personal ID/Card**, certain information must be provided by the user, such as:

- The **Item** type or category.

The following are supported for user selection:
Access Card, Club Membership, Commercial License,
Credit Card, Debit Card, Dental Plan, Discount Savings,
Drivers License, Employee Badge, Gift Card, Green
Card, Library Card, License to Carry, Medical
Certificate, Medical Device, Medical Health Plan,
Passport, Pilot License, Permanent Resident Card,
Prescription Plan, Professional License, Social Security,
Store Card, Student ID, Voter ID, Other

The user can also define a custom type for assignment
when adding a new item to a Lockbox.

- In the event where a new **Personal ID/Card** is added for a **Family Member**, that member must either be selected from a drop-down menu, or if non-existing, defined first to a new virtual Lockbox.

- An image of the original Document Item.

As a minimum requirement, import the Source Document front image by either taking a picture, or scanning with the device camera. Selecting an existing image from the Photo Library is another method.

A supplementary secondary image, such as the back side of the source document, may also be imported for completeness.
Tap on either placeholder image to initiate the import function.

After each import, if required, use the top right Rotation

Icon above the respective image view to change the

orientation.

- Details extracted from the original Personal ID/Card are to be provided as follows::

After importing an item image, and if any potential text is contained in the image, a ‘OCR’ button is shown to the left location of the text field for which input should be provided. Tapping the button will enable the extracting of text from the image for direct import and avoid using the keyboard. If no ‘OCR’ button is shown, then input is expected via the device keyboard.

Tap the ‘OCR’ button at the top left corner of the image which contains the text of interest. If necessary, use a

two-finger gesture to rotate and scale the image to horizontally position the text of interest for extraction. Use one finger to draw a rectangle around the text, and if acceptable, the extracted text will then be copied into the appropriate text field.

The image displays two side-by-side screenshots of the UberVault mobile application interface, showing the process of adding a personal ID or card item.

Screenshot 1: Add Personal ID/Card Item

This screen shows basic user information: "Joe Olaf Doe (JoJo)" and "DoB: Jan 12, 1994". Below this, a section titled "Drivers License" contains the following fields:

- Reference Date:** A text input showing "Jan 12, 2026" with a red "Alert!" button next to it.
- Item Identifier:** An OCR field containing "66290906" with a clear button.
- Memo (optional):** An OCR field containing "Demo Drivers License" with a clear button.
- Issued By (optional):** An OCR field containing "Texas Department Of Transportation" with a clear button.

At the bottom are navigation buttons: "Back", "Info (i)", and "Next".

Screenshot 2: Add Digital ID/Card Item

This screen shows the same basic user information. The "Drivers License" section includes an "Alert?" button and a note about monitoring the reference date. It also includes a question "Do you wish to enable Item Monitoring?" with "No" and "Yes" buttons. The "Issued By (optional)" field and navigation buttons are identical to the first screenshot.

1. Select a Reference Date pertaining to the item, e. g. Expiration, Renewal, etc. Indicate if the date is to be monitored to alert the user when expiration of the item occurs.

2. Input the unique item identifier. Duplicates are not allowed. Alternatively, the app will assign an item identifier for you.

Additional optional input data is recommended:

3. Any supporting memo text for future reference.
4. Enter the name of organization that issued the item.

Optional input, if left empty, will be replaced with 'TBD' (To Be Determined).

You can update that information at a later time from within the 'List/Edit Items' entry located on the 'UberVault' main app page.

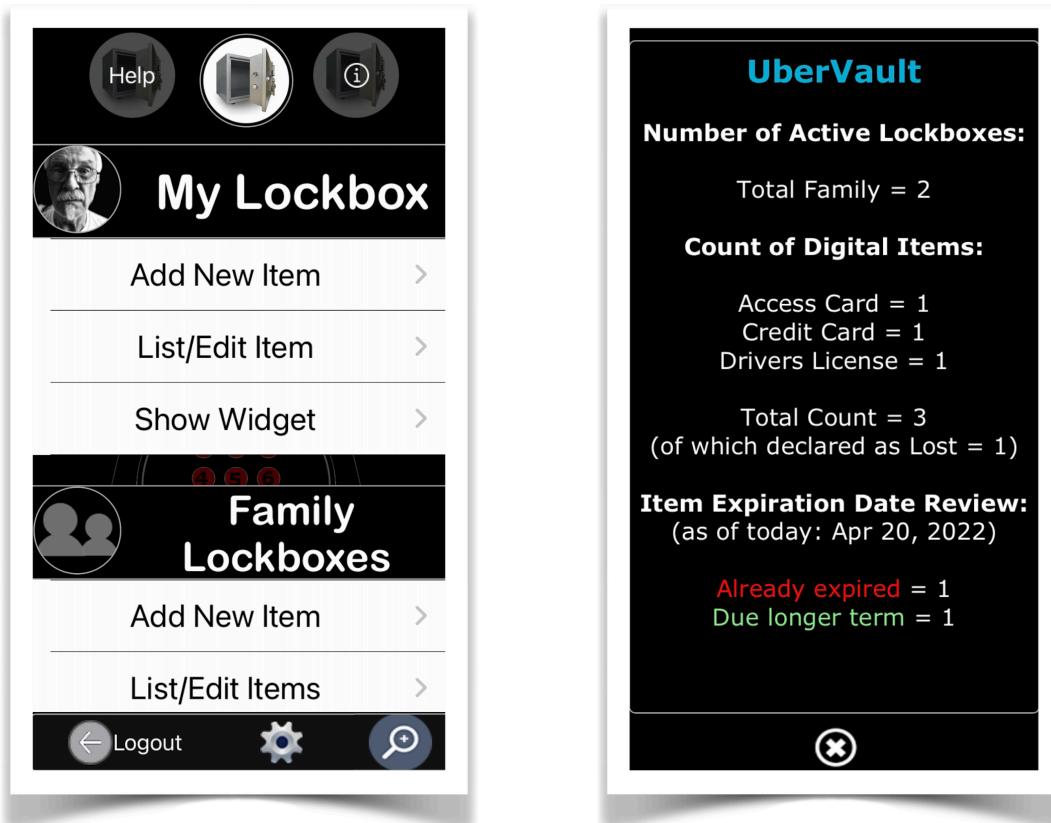

NOTE: The combination of the input data provided can be used for content searches and will also form a unique electronic item of a Personal ID/Card.
Only one virtual Lockbox per user can be defined.

Multiple item entries per Lockbox are allowed.
Duplicates, however, are not.

B. List/Edit Item

Lists **Personal ID/Cards** belonging to either just the device owner or of all family members.

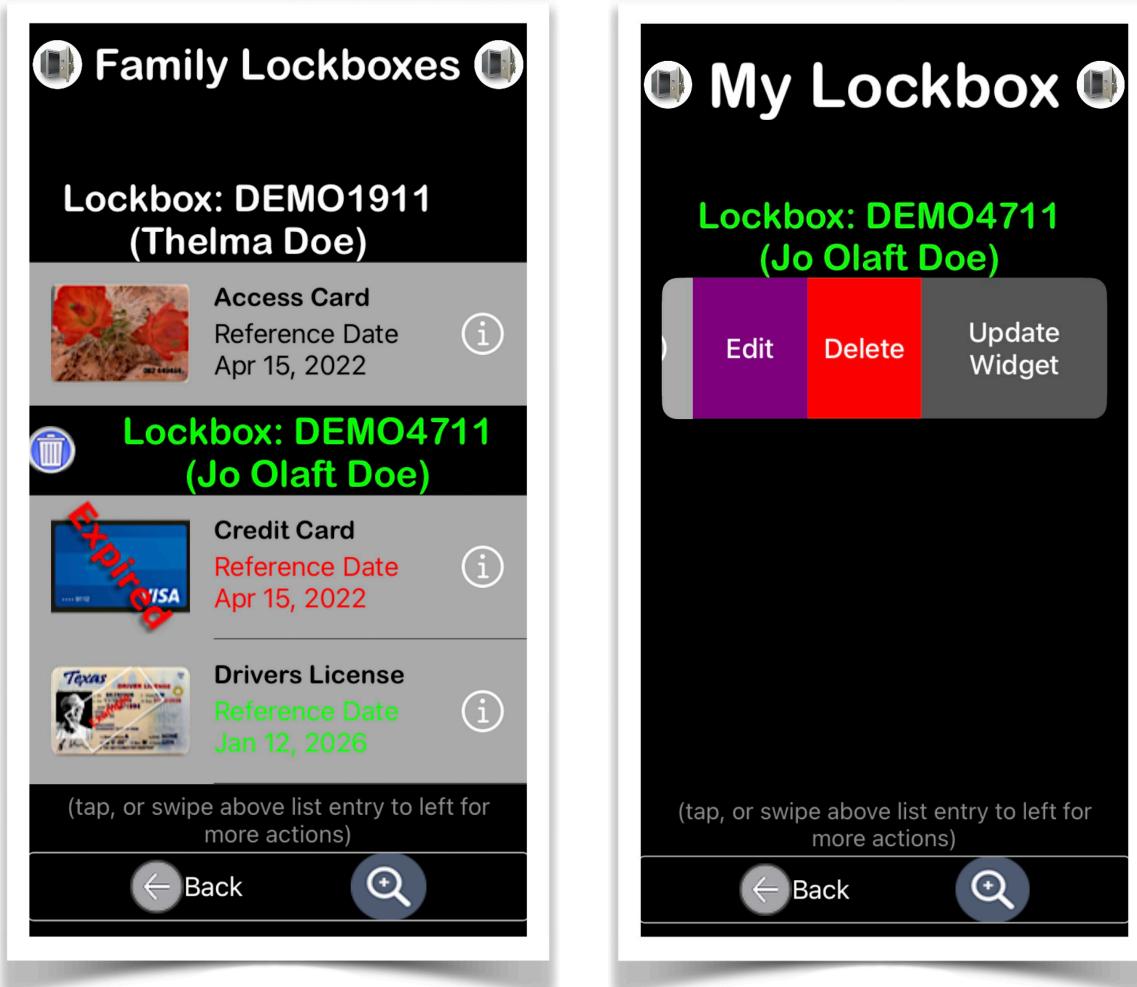

Tapping the ‘Info’ button at the top right corner will display a page of statistics regarding the overall UberVault usage. Tapping the bottom right Search icon will display a page allowing for the searching of the UberVault virtual Lockboxes content.

Note that the app Badge Icon will display the number of monitored items that have passed their expiration date.

Tapping the List/Edit Item entry will display a list of all items stored in a virtual a Lockbox for a given owner.

Additional actions, such as 'Edit', 'Delete', and (for device owner) 'Update Widget', can be performed when selecting/swiping a given entry on the displayed list.

In the event where an individual item or all items of a Family Lockbox are requested for deletion, the app will first perform a full backup of the UberVault data base in the background and add it to a list of available files for data restoration.

A search function is provided to display Lockbox items based on multiple content criteria.

Tapping a list entry will display a persons Personal ID/ Card Item. If multiple Personal ID/Cards are on file by a user, then the view allows for scrolling through all the respective Lockbox entries. A given Personal ID/Card image can also be exported by invoking the built-in iOS action functions.

Tap the top right Magnifier icon to activate the Magnifier multi-feature.

If app '**UberVault**' is run on iOS/iPadOS version 13 (and above), then a prompt will be displayed giving the user to select either a magnification feature, an OCR option to extract text from the screen, or to edit the Memo section of the shown Lockbox Item.

1. To initiate the Magnifier, double-tap and press one finger anywhere at the top of the screen and slide to the area of interest to improve visibility.

2. To initiate OCR use, press and hold one finger anywhere at the top of the screen and slide to the area of interest to append extracted text to the Memo section of this Lockbox Item.

3. The Memo section can be extensively modified when the ‘Edit Memo’ option is selected.

The Memo section is enabled for user interactivity, such as tapping on a web link would cause the **Safari** browser to launch externally to the '**UberVault**' app. Tapping a phone number would initiate a phone call if the device is supporting Cellular service.

Also, the Lockbox Item's Memo content is included when the user searches for any text of interest.

C. Show Widget

Will display an image of the **Personal ID/Card** Widget on the screen.

Only the device owner will have a Widget shown here and can also be reconfigured under the apps' Preferences section to be stored on the Lock or Home screen of your device.

NOTE: 'Widgets' features are only applicable for devices running iOS/iPadOS 14+.

V. Preferences

- A. Lockbox Accounts
- B. Login Credentials
- C. App Privacy Settings
- D. Status Bar
- E. Feedback
- F. Lock/Home Screen Widget
- G. Backup/Restore
- H. Show Quick Tips
- I. Face/Touch ID
- J. Access Security Sentinel

Allows for the configuration of several app-wide behaviors.

A. Lockbox Accounts

Lockbox Accounts are only created when:

- a) the Apple device owner goes through the initial ‘UberVault’ app installation process and establishes the primary Lockbox Account
- b) the user is adding the first item into the UberVault database for another family member/user
- c) all user Lockbox Accounts and their associated records were deleted and the authorized user starts to enter data again from scratch

The Lockbox Accounts features, only available from the app's Preferences menu, requires secured access

authorization and will only allow to either **edit** a Lockbox' Owner private information, or **permanently delete** selected or all Lockbox Accounts, including their associated information. New Lockbox Accounts cannot be created here, neither can the ID of an existing Lockbox Account be changed by the user.

The Primary Lockbox Account holder is highlighted in **green** color.

The image displays three screenshots of a mobile application for managing Lockbox accounts. The first screenshot shows a list of five accounts. The second screenshot shows a confirmation dialog for editing the selected account. The third screenshot shows a detailed form for entering owner information.

Deleting a selected or all Lockbox Accounts will cause a message to be shown requiring user approval for the action to proceed.

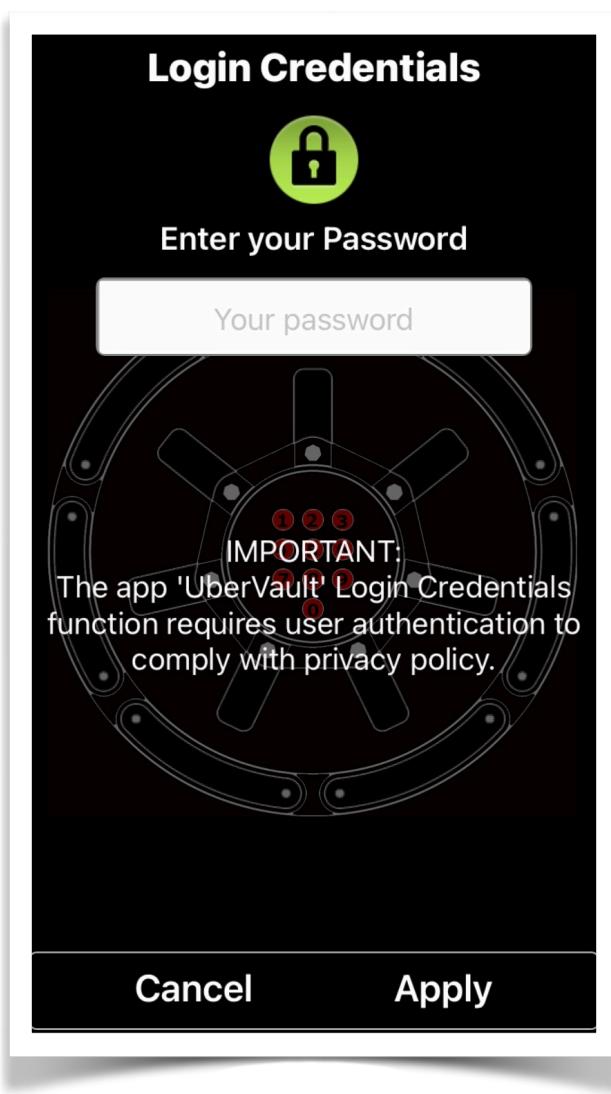

If all Lockbox Accounts have been deleted by the user, then the app Main screen will display its initial selection content. The user can then opt to start entering new item data. A prompt will instruct the user how to proceed.

B. Login Credentials

Update the login information in order for the app to be used securely. For privacy reasons, you first have to enter the current app password in order to access this feature.

To prevent unauthorized access to the features of the '**UberVault**' app, you need to provide the following:

Password

Minimum of four Characters

Security Question

Pick one of the presented options from the Drop-down view.

Security Answer

This is your response that is assigned to the Security Question

IMPORTANT: The security Question/Answer pair is required in case you wish to change or recover the app login password.

Login Screen Examples

If the login password cannot be recovered, then the only way to re-enable access to the app features is by either deleting and re-installing the app from the App Store (resulting in the loss of data), or loading a previously saved '**UberVault**' backup file.

Please perform regular device data back-ups in case a restore is ever needed.

C. App Privacy Settings

Displays the current iOS privacy settings related to app '**UberVault**'.

The user can change the settings based on certain features to be performed by the app.

D. Status Bar

The status bar for your device can be hidden or displayed at the top of the apps' views based on your personal preference.

E. Feedback

Transfer constructive feedback and suggestions to our developers via the [Apple App Store](#).

Your comments will be reviewed by our team to improve the functionality of the app in upcoming releases.

The device has to be connected to the Internet in order to perform this function.

F. LOCK/HOME SCREEN WIDGET

Users running the '**UberVault**' app on devices with version iOS/iPadOS 14+ can configure one large sized widget for prominent display on the Home Screen and/or the Lock Screen (Select Settings—>Face ID & Passcode—>[enter your passcode]—>ALLOW ACCESS WHEN LOCKED:—>Today View).

Touching a widget on a Lock or Home Screen will cause the ‘**UberVault**’ app be launched.

G. **BACKUP/RESTORE**

The UberVault Lockbox database contained within the app can be exported as a backup file either through File Sharing, or via other iOS Actions.

The Backup and Restore functions can be accessed from the apps’ Preferences view.

Note that some back files will be generated automatically in the background, such when Lockbox Items are deleted or before a Lockbox database is restored.

Backup files are securely encoded utilizing proprietary algorithms to prevent unauthorized access when exported outside the '**UberVault**' app.

Please be aware that a backup file can only be restored by the user authenticating with the same password that was in effect when the backup was created.

Backup Function

When a user requests a backup, the system offers the option to generate a file for export to be accessed via iTunes/macOS File sharing or other available iOS Actions (such as email attachment, Files storages, etc).

The exported file has a Date/Time-stamped name with an .lkbox extension.

Restore Function

For privacy reasons, you first have to enter your current app password in order to access the Backup File Restore Function.

Invoking the Restore button will display a list of available files for maintenance as well as restoration into the '**UberVault**' app.
This list can hold a history of up to ten (10) copies of Lockbox backup file identifiers.

A list entry with a Checkmark indicates the most recently created backup file.

The list of restore files can be selectively deleted or moved for external access via File Sharing using the iTunes or macOS Finder app.

Before a selected file is restored (and replacing the live UberVault database and user settings), a copy of the current database is automatically saved first and added to this list for available future restoration.

When a backup file is added to the history list, and the maximum number (10) of list entries has been reached, the oldest file is permanently removed first to prevent exceeding the limit of the list.

A backup file consists of an alpha preamble plus the date and time of creation.

A preamble of 'UVBK_' indicates a file which is only accessible internally by the 'UberVault' app.

Whereas a preamble of 'UVBKFS_' denotes a file which is accessible internally by the 'UberVault' app as well as via File Sharing with iTunes or the macOS Finder access procedure.

A backup file can be securely imported on any iOS/iPadOS device running the '**UberVault**' app.

Prior to loading a backup file from an external source, the user has to first log into the '**UberVault**' app.

The password that was in effect at the time when the backup file was created needs to be provided for authentication purposes.

UberVault Backup File Authentication

Please enter the password that was used when the file was created.

IMPORTANT:
The file can only be restored by app 'UberVault' after authenticating with the user password in effect at the time the backup (export) was performed.

Cancel **Apply**

Preferences

iTunes Backup/Restore
The backup file (originated from device 'iPhone') was successfully processed, replacing the current Virtual Lockboxes database of the 'UberVault' app.
Please restart the app now to continue normal operation.

OK

Face ID (On)

Access Security Sentinel (15 minutes)

Back **Privacy** **(i)**

Upon successful importation of the backup database, the user needs to exit the application and restart the 'UberVault' app from the Home Screen to continue normal operation, using the same login password.

NOTE: A local push notification will alert the user if the Inventory database was modified but not backed up within a certain time frame.

H. SHOW QUICK TIPS

When selected to ON, will display app usage tips and informative prompts at certain phases during user data input.

The tips can be turned off once the user is familiar with the basic app operating methods.

I. FACE/TOUCH ID

If this switch is set On, for devices having the built-in hardware feature, will use it to authenticate the user to log into the app.

J. ACCESS SECURITY SENTINEL

The Access Security Sentinel causes the app to automatically log out after a user-set inactivity period.

VI. App Help Guide

The App Help Guide will be displayed in a PDF view which offers user-friendly search, copy, and document sharing options.

Tapping the 'Help' button at the top left side of the view will launch the in-app Help Guide.

This example displays a version of the App Help Manual. The bottom of the view allows to show/hide the document side bar, search and page navigation functions, as well as iOS user actions which allow for the external transfer of the manual.

The image consists of two side-by-side screenshots of the UberVault mobile application. Both screenshots feature a dark-themed interface with white text and icons.

Left Screenshot (Home Screen):

- Top Bar:** Shows the UberVault logo and a "Application Help Guide" button.
- Content Area:** Features a circular logo with a grid pattern, the text "UberVault" in large bold letters, and a subtitle: "Keep a securely stored digital copy of Digital ID/Cards for you and your family."
- Buttons:** A "Download on the App Store" button and copyright information: "© 2022 Omni Consulting, LLC".
- Bottom Footer:** Includes "App Version 2.7", "Page 1 of 33", and "May 28, 2022".
- Bottom Bar:** Contains "Done", a magnifying glass icon for search, a share icon, a "Bar" button, and navigation arrows.

Right Screenshot (Help Guide Screen):

- Top Bar:** Shows a search bar with placeholder text "Enter Search Text" and a "Cancel" button.
- Content Area:** Features the "UberVault" logo and subtitle, followed by the "Application Help Guide" title.
- Buttons:** A "Download on the App Store" button and copyright information: "© 2022 Omni Consulting, LLC".
- Bottom Footer:** Includes "App Version 2.7", "Page 1 of 33", and "May 28, 2022".
- Bottom Bar:** Contains a keyboard overlay with letters Q-W-E-R-T-Y-U-I-O-P, A-S-D-F-G-H-J-K-L, Z-X-C-V-B-N-M, and a backspace key. It also includes "123", a smiley face icon, "space", "search", a globe icon, and a microphone icon.
